## PROJECTS

### LLM Course Assistant with RAG

2026 - Present

React · TypeScript · Next.js · FastAPI · PostgreSQL · ChromaDB · OpenAI API · Docker · GCP Cloud Run

- Built a retrieval-augmented generation course assistant that ingests lecture notes and PDFs, chunks and embeds documents into ChromaDB, and generates source-cited answers via the OpenAI API.
- Designed a FastAPI backend to handle document ingestion, embedding pipeline, and LLM query routing; React + TypeScript frontend for a student-facing chat interface.
- Containerized with Docker and deployed to GCP Cloud Run with PostgreSQL for session and user data persistence.

### AI Resume & Job Match Analyzer

March 2026- Jul 2026

React · TypeScript · Tailwind CSS · FastAPI · PostgreSQL · OpenAI API · Redis · Celery · Docker · GCP Cloud Run

- Developed an LLM-powered tool that parses resumes and job descriptions, extracts skill gaps using semantic similarity scoring, and generates tailored bullet recommendations via structured prompting.
- Implemented async background processing with Celery and Redis to handle PDF/DOCX parsing and embedding jobs without blocking the API.
- Deployed full-stack application on GCP Cloud Run with Docker, backed by PostgreSQL for resume and job description storage.

## PROFESSIONAL EXPERIENCE

### Software Engineer (Contract) | StrainPilot | Seattle, WA

Aug 2025 – Dec 2025

- Architected an early-stage RAG pipeline using Supabase pgvector, implementing document chunking and semantic retrieval to ground AI responses in a proprietary knowledge base.
- Integrated OpenAI API to build an AI agent capable of querying a proprietary knowledge base, improving contributor data quality workflows.
- Developed 6+ React features for an AI-powered plant wellness platform, validated with Jest test suites, collaborating cross-functionally to refine model outputs and reduce response latency by 15%.
- Optimized Supabase database interactions to support real-time AI responses at scale, improving query accuracy and reliability.

### Software Engineer | Zonar Systems | Seattle, WA

Jan 2023 – Feb 2025

- Built and maintained 5+ production REST APIs in FastAPI and Python powering telematics integrations across fleet.
- Designed and deployed cloud infrastructure using Kubernetes, Terraform, and GitLab CI/CD, authoring pipeline configurations and IaC modules that standardized deployments across teams and increased system reliability and scalability.
- Instrumented Datadog monitoring across services, cutting downtime by 20% and improving observability.
- Delivered 10+ reusable UI components in React and Angular across 5 production apps, reducing load times by 30% and increasing user engagement by 20%.
- Engineered a FastAPI service from scratch to handle CARB emissions compliance logic for an entire vehicle fleet, backed by a PyTest suite achieving 95% test coverage, shipping on an accelerated timeline with zero compliance gaps.
- Managed Elasticsearch infrastructure and lifecycle policies to control storage costs and sustain query performance.
- Built a Kotlin-based Apache Beam Dataflow job from the ground up, consuming vehicle telemetry events from Pub/Sub, enriching records with additional metadata, and writing transformed data to BigQuery for downstream analytics.

### Junior Software Engineer | Sirrus7 | Seattle, WA

June 2022 – Dec 2022

- Built a Flask backend service sustaining 10K+ daily requests, optimizing response times to support real-time geospatial data workflows.
- Implemented API-driven features in an Angular web application for geospatial data processing and visualization.
- Contributed to cloud infrastructure using Terraform and Docker, deploying services to GCP.

### Machinist Mate | U.S. Navy | Bangor, WA

Dec 2013 – Dec 2018

- Identified a critical bug in SKED maintenance scheduling software while overseeing Auxiliary Division operations aboard a nuclear-powered submarine — sparking a transition into software engineering.

## TECHNICAL SKILLS

**Languages + Frameworks:** Python (FastAPI, Flask), JavaScript, TypeScript (React, Angular), Kotlin, Node.js, HTML, CSS (Tailwind CSS, SCSS), HCL, Bash, SQL

**Data Technologies:** PostgreSQL, BigQuery, Supabase, Elasticsearch, ChromaDB, Redis

**Cloud + DevOps:** GCP, Azure, Docker, Kubernetes, Terraform, Git, Datadog, Celery

**Tools + Methodologies:** Agile/Scrum, CI/CD, Infrastructure as Code, RAG Pipelines, Unit & Integration Testing (Jest, PyTest, Unittest), Monitoring & Logging

## EDUCATION

**Master of Science – Information Management (AI Specialization) | University of Washington**

Expected June 2027

**Bachelor of Science – Informatics | University of Washington**

June 2022
